CDNA ENCODING THE HUMAN NOVEL ALPHA2 DELTA4 CALCIUM CHANNEL SUBUNIT

ABSTRACT OF THE INVENTION

The present invention provides nucleic acid and polypeptide sequences describing an isoform of the $\alpha2\delta-4$ subunit of a voltage gated calcium channel.

The nucleic acids described herein can be used to produce functional $\alpha 2\delta -4$ protein. The calcium channel $\alpha 2\delta -4$ protein may be isolated for the purposes of binding experiments or may be used in cells to form a functional calcium channel complex.
